

HARMONIC OCTAVE MAP

Standing-Wave Nodal Radii & Element Nodes (1 -> 118)

MECHANICAL KEY

Primary Shedder [+]

Loose outer ring; sheds freely

Secondary Shedder [2+]

Two outer rings; higher tension

Structural Hub [0]

Balanced symmetric lattice geometry

High Aether Sink [-]

Aggressive inward boundary pull

Harmonic Zero [0]

Octave closure; inert / zero shear

Core Transition Tensor [t]

Multi-octave internal torsional fold

HOW TO READ THE RINGS

- Dashed rings = Acoustic octaves
- Expanding outward (01 -> 07) scales the atom, packing in more boundary rings.
- At the ring (White): Octave is full. Pressure balances to zero (inert).
- Just past a ring (Blue): A new octave starts with a loose ring ready to shed.
- Just before a ring (Red): Octave is nearly full; pulls hard to grab a ring.
